***Re: NEORSD – Chagrin River and Lake Erie Tributaries Stormwater Master Planning Project  
Stream Gage Installation on Euclid Creek at Mayfield Village Property***

Dear Mayfield Village:

The Northeast Ohio Regional Sewer District (NEORSD) has entered into a contract with Wade Trim and R2O Consulting (R2O) for the stormwater master planning study of the Chagrin River and Lake Erie Tributaries (CHALET) Watershed. The targeted part of the watershed spans portions of Cuyahoga and Lake Counties. The purpose of the study is to characterize stormwater problems and develop potential solutions within the CHALET Watershed.

As part of this study, Wade Trim will develop and calibrate a hydrologic and hydraulic model of the CHALET Watershed. To assist in development of this model, R2O will install a temporary stream gage on or near your property on Euclid Creek White Rd. at Marcum Blvd, which is Cuyahoga County Parcel No. 831-04-001. The gage will be used to record the flood stage readings. The gage will consist of an 8ft length of 2” steel pipe, set along the stream bank just outside of the channel. Areas disturbed by the installation of the gage will be restored as close as possible to the existing conditions.

The gage installation is scheduled for late March 2019 and should take less than one day to complete. The gage will remain in place for a period of up to 9 months. During this time, R2O personnel will visit the site after larger rains event to collect the data and maintain the gage. At the completion of the monitoring period, the gage will be removed.

This letter serves as the notification required under Ohio Revised Code Section 6119.34.

Please feel free to contact me either by phone at (216) 881-6600 or e-mail at [jowettj@neorsd.org](mailto:jowettj@neorsd.org) with any questions or concerns.

Sincerely,

Jeffrey Jowett  
Watershed Team Leader
